

# Simple, safe, and silent automatic steering. Powerful in the lineup. DirecSteer™

DirecSteer is Raven's most intuitive retrofit autosteer solution for tractors and self-propelled farm machines. Its electric drive packs high torque and silent operation into a cost-competitive, easy-to-install unit for all equipment brands.

Built on decades of steering innovation and expertise, DirecSteer is a high-precision, noise-free guidance solution at a competitive-based price that effortlessly guides you to increased yields and success. It reduces operator fatigue and crop damage by delivering highly accurate steering in all conditions.

## Key Benefits

- High-torque electric-drive motor.
- Easy to install and transfer between machines.
- Silent operation.
- Scalable from sub-meter to sub-inch precision.
- Consistent in all field conditions.
- Allows for manual steering.
- Compatible with all major equipment brands.
- Affordable solution that drives you forward on your Path to Autonomy.

*"We have noticed very solid stability in rider alignment working with Raven's DirecSteer. In many years of steering experience, I've never seen one turn like that. It's very stable, picking up the lines easily. Even while passing through near trees and power transmission towers, the signal is maintained. We are very satisfied with Raven DirecSteer."*
